

INJECTORS FOR BOILER FEEDING

"PATTERN S" ONE MOVEMENT INJECTOR

This injector, made solely by Holden & Brooke Ltd, is the injector in its most perfected and highly developed form. Since its introduction it has been recognized as the simplest, best and most efficient injector and for years has been adopted as a recognized standard by leading engineers and in up-to-date power stations, works and factories

STEAM AND WATER ARE ADMITTED, REGULATED AND ENTIRELY CONTROLLED BY THE MOVEMENT OF ONE HANDLE ONLY

Further it has self-regulating nozzles and consequently it is always working at its highest efficiency whether the pressure be high or low. It deals with hot water and is the best for feeding through economisers and generally for those extreme duties and conditions which, when certainty of action is called for, are outside the scope of ordinary injectors

Made for pressures up to 350 lbs if required
